

September 2019

# Volunteers wanted

---

Do you work with biological data or use biological computer programs / websites?

---

We're running a study investigating the way people from different computational and biological backgrounds create mental models of biological data.

## **How long?**

Participants are asked to spend 30 minutes to an hour (maximum) participating in a semi-structured interview, which will be recorded.

## **Who?**

We're looking for people who work with genomic and proteomic data, from any and all of these backgrounds:

- wet lab backgrounds (update, September 2019 – especially keen on wet lab backgrounds, this is the place we have the fewest participants!)
- bioinformaticians with < 10 years experience
- research software engineering background who work in a biological domain
- anyone who fits somewhere in between

## **How do I volunteer?**

Anyone who is interested should contact Yo Yehudi at:
